China-Pakistan Economic Corridor: Prospects and Challenges

Sala Riunioni DIMI

Dipartimento di Ingegneria Meccanica e Industriale

Via Branze 38, 25123 Brescia

Prof. Mujtaba Agha

Capital University of Science and Technology, Pakistan

Through the Belt and Road Initiative, China aims at reviving the ancient trade “Silk route” that spanned Asia, Africa and Europe. The China-Pakistan Economic Corridor (CPEC) consists of proposed 3,000-km network of roads, railways and pipelines.

The seminar presents an analysis of CPEC from Pakistan’s perspective, considering both macro-economics and logistic aspects, with discussion on three modes of transport: road, rail and inland water transport. In particular, the prospects and challenges faced in this initiative will be addressed from a supply chain perspective.
